

PyCAMA - Support #28431

[PyCAMA] How long should the daily reports be available once the time-dependent monitoring is in place?

10/15/2020 10:26 AM - Maarten Sneep

Status:	Feedback	Start date:	10/15/2020
Priority:	Normal	Due date:	12/11/2020
Assignee:	Jacques Claas	% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:	PyCAMA 1.0		
Description			
<p>A the moment we maintain an archive of the daily pycama reports on http://mpc-l2.tropomi.eu Since this system has to move to a cloud provider at some point, we'd like to limit the archive to a fixed length. From the access logs we can see that 90% of all access happens within the first three months after sensing. We suggest to limit the archive to 4 months from sensing once the time-dependent monitoring is in place. The extracted files will be kept (in some form, perhaps concatenated and stripped from the L3 data), as these are required for the time-dependent monitoring.</p> <p>Please provide feedback on this so that we can take your use of these reports into account.</p>
